G2 MEETS NEW MDOT PREQUALIFICATION REQUIREMENTS

Troy, Mich./July 21, 2008 – G2 Consulting Group became one of the first consulting engineering firms to submit information for the Michigan Department of Transportation’s (MDOT) new consultant prequalification process.

“Our new MDOT prequal assures clients that G2 has the necessary systems in place to provide accurate and precise testing and reports. It all adds up to higher quality information, fewer errors and ultimately, better projects,” says Dave Wanlass, the G2 project manager who oversees all G2’s MDOT work.

Developed over several months by MDOT and the Association of Consulting Engineering Companies Michigan Chapter (ACEC/Michigan), the new process ensures consistency and reasonableness in the steps and information required of applicants.

After review and evaluation, MDOT approved G2’s applications in every category, including:

- Asbestos investigations
- Aggregate inspection and testing
- Bituminous pavement inspection
- Density testing and inspection
- Engineering assistance
- Geotechnical engineering services
- Portland cement concrete inspection and testing
- Site investigation

– more –

G2's submittal encompassed the firm's experience, staff, equipment, financials and a comprehensive quality control plan (QCP), which describes the methods that G2 employs to provide accurate and precise results and reports to clients. The QCP includes G2's quality system manual (QSM), documentation policies and materials testing laboratory qualifications.

The QSM relies on consistently utilizing key employees in the roles of quality assurance manager, quality system manager and quality control supervisor. These experienced professionals ensure the proper documentation policies are followed and reviewed through G2's design and construction inspection and testing process.

G2's materials testing laboratory also participates in a voluntary inspection performed by the Cement and Concrete Reference Laboratory of the National Institute of Standards and Technology.

G2, a Troy, Mich.-based engineering firm providing geotechnical, environmental and construction engineering services, will now service MDOT's six technical services centers in Oakland, Wayne, Macomb and St. Clair counties through November 2008. Technical services centers are regional offices for engineers, project managers and other staff handling MDOT projects in that area.

G2 Consulting Group (www.g2consultinggroup.com) is a full-service engineering firm serving Fortune 500 companies, major utilities, property owners, government agencies and leading architectural, engineering and construction firms across the United States. Based in Troy, Mich., G2 also has offices in Brighton, Mich., and suburban Chicago, Ill.
